M-PUSH regolabile
con magnete neodimio o paracolpo.

M-PUSH adjustable
with neodymium magnet or with buffer.

I nuovi cricchetti **M-PUSH 0496, 0497, 0498, 0499** sono prodotti interamente in Italia presso **MACO** e si distinguono principalmente per queste caratteristiche:

Regolazione 0-6 mm	> Per adattare il funzionamento con ogni tipo di anta, garantendo la perfetta complanarità tra le ante in posizione di chiusura.
Perno anti-svitamento	> Per garantire la massima sicurezza negli ambienti in presenza di bambini.
Sgancio di soli 1,8 mm	> Per minimizzare lo spazio di aria tra l'antina e il mobile.
Garanzia 100.000 cicli	> Certificazione CATAS per un ciclo di vita del prodotto praticamente infinito.
Magnetico o paracolpo	> Per andare incontro alle esigenze del cliente. Con una cerniera senza molla (o con molla al contrario) è raccomandato l'uso del cricchetto con magnete per trattenere l'antina in chiusura e aprirla con uno sgancio rapido senza l'ausilio di maniglie e pomoli. Con una cerniera tradizionale è consigliabile l'uso del cricchetto con paracolpo per permettere l'apertura dell'antina senza l'ausilio di maniglie o pomoli.
Due misure, due corse	> Il cricchetto corto 0496 e 0497 ha una corsa di 14 mm ed è indicato per antine piccole in spessore e grandezza. Il cricchetto lungo 0498 e 0499 ha una corsa di 37 mm ed è indicato per antine medio-grandi in spessore e grandezza.
Montaggio semplice	> Attraverso le fotografie di questa brochure oppure nel nuovo video 3D su www.maco.it
Quattro colori	> Bianco, nero, grigio chiaro e grigio piombo.

MACO è sempre impegnata ad investire sul futuro e sull'innovazione per soluzioni dedicate al settore del mobile con ferramenta e accessori di alta qualità Made in Italy. Visita il sito **www.maco.it**.

The new push-latches **M-PUSH 0496, 0497, 0498, 0499** are completely manufactured in Italy at the company MACO and are mainly distinguished by these features:

Regulation 0-6 mm	> To adapt the running of the push-latch with any door, granting the perfect complanarity between doors in closing position.
Unremovable pin	> To ensure maximum safety in case of presence of children.
Activation gap 1,8 mm only	> To minimize the air space between the door and the cabinet.
100.000 cycle warranty	> CATAS' Certificate for a virtually infinite product life cycle.
Magnet or buffer	> To meet the needs of the customer. With a hinge without spring (or with reverse spring) we recommend to use the push-latch with magnet to hold the door in closing position and to open it with a quick release without using handles or knobs. With a traditional hinge we suggest to use the push-latch with buffer to open the door without using handles or knobs.
Two sizes, two strokes	> The short push-latch 0496 and 0497 has a stroke of 14 mm and it is recommended for small doors, in thickness and size. The long push-latch 0498 and 0499 has a stroke of 37 mm and it is recommended for medium to large doors, in thickness and size.
Easy assembling	> Through the images shown in this leaflet or in the new 3D video on www.maco.it
Four colours	> White, black, light grey and lead grey.

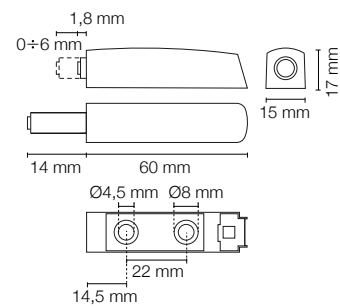

MACO is always committed to invest in the future and in the innovation for solutions dedicated to the furniture industry with high quality hardware and furniture fittings Made in Italy. Visit the website **www.maco.it**.
